

ClieNFarms

Climate Neutral Farms

ClieNFarms is a 4-year Innovation Action project funded by the European Commission to support the European Green Deal. The general aim of ClieNFarms is to co-develop and upscale systemic locally relevant solutions to reach climate neutral and climate resilient sustainable farms across Europe.

ClieNFarms scope is based on a demonstration approach through a case-study structure that will allow a strong empowerment of farmers and supply chain accompanied by a smooth dissemination and replication of the tested innovations. These are called the I3S (Innovative Systemic Solutions Space), 20 demonstration case studies where systemic innovative solutions will be tested and evaluated using up-to-date modelling approaches and multicriteria assessment tools. With a diversity of production systems (crops, cattle, dairy, special crop productions, etc) and geographical situations (from East to West and North to South of Europe, plus one in New-Zealand), the goal of I3S is to develop business models that ensure the financial sustainability of the solutions, with an upscaling methodology.

A consortium of 33 partners lead by INRARE will interactively integrate and improve existing solutions to achieve economically viable business models in farming systems through a multi-actor approach.
